

ETAC GLOBAL LIMITED is a privately-owned consortium that specializes in mining and mineral resources development with the head office based in Dubai, UAE.

Focusing on developing countries located in Africa we aim to sustainably develop African based mineral resources and uplift the local communities and local economies.

By offering a turnkey solution to developing not only the mineral resource opportunities but looking at the holistic enterprise development surrounding sustainable mining operations including education development, skills transfer, youth development, agricultural development and medical services.

ETAC GLOBAL LIMITED's aim is to facilitate, manage and introduce sustainable development to ensure our children's future.

TOGETHER WE CAN MAKE A DIFFERENCE.

EXPLORATION

EATC GLOBAL LIMITED's focus is to develop possible mineral resource deposits from the ground up. Starting with a specialist team of experts in the mining industry with a proven track record, we identify possible mineral deposits. We then establish the viability of developing the resource sustainably. After confirmation of mineral deposits we send in our team to look at a holistic development of the area and put together a project plan to make sure that local development of education, skills transfer and youth development take priority in the project and form the basis for sustained local economic development.

MINING

ETAC GLOBAL LIMITED believe that we need to give as much as we take. This principal is the basis for sustainable development in any sector, especially in mining. Through implementation of delivering basic services like clean running water and much needed medical services combined with a base setup for education and youth development we make sure that we develop the local economy and empower the youth with skills to be self-sustainable in a developing economy.

INVESTMENT PROJECTS

ETAC GLOBAL LIMITED offers investors sound mining opportunities ranging from Greenfield projects to Brownfield projects and expanding operational mining operations in various mineral resources. These projects are carefully hand picked and well researched to make sure that investors can get a return on their investment as well as form part of giving back by supporting our local development projects as part of project delivery. We are continuously adding to our investors portfolio and welcomes abled investors with an appetite for sustainable mining development.
